

Ideation Phase

Empathize & Discover

Date	18th June 2026
Team ID	
Project Name	MediCareBook (Book a Doctor)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Project Implementation: Patient Empathy Map Canvas (Book a Doctor)

Patient Empathy Map Data Matrix:

THINK & FEEL	HEAR
"I need to find a specialist quickly without long clinic holds." "Are these doctor qualifications verified by a system auditor?" "I need to ensure my private login and credentials are encrypted."	- Colleagues warning that directory portals listing unvetted doctors lead to scams. - Peer suggestions to check hourly consulting rates before scheduling. - Complaints about registration double-bookings.
SAY & DO	SEE

• Navigates to filter-search specialization lists. • Fills booking hour parameter forms. • Reviews reservation status in the local account ledger.	• Crowded hospital foyers and stressed desk workers. • Clunky web interfaces full of unrelated ads and broken links. • Lack of verified badge indicators on general directories.
PAIN	GAIN
• Manual queue times and physical booking delays. • Risk of consulting unqualified clinicians. • Unannounced scheduling conflicts and cancellations.	• Instant confirmation showing scheduling state. • Sorting registries by specialized category or practitioner name. • Isolated role dashboards keeping records private.
