

Project Design Phase

Problem – Solution Fit Canvas

Date	18th June 2026
Team ID	
Project Name	MediCareBook (Book a Doctor)
Maximum Marks	2 Marks

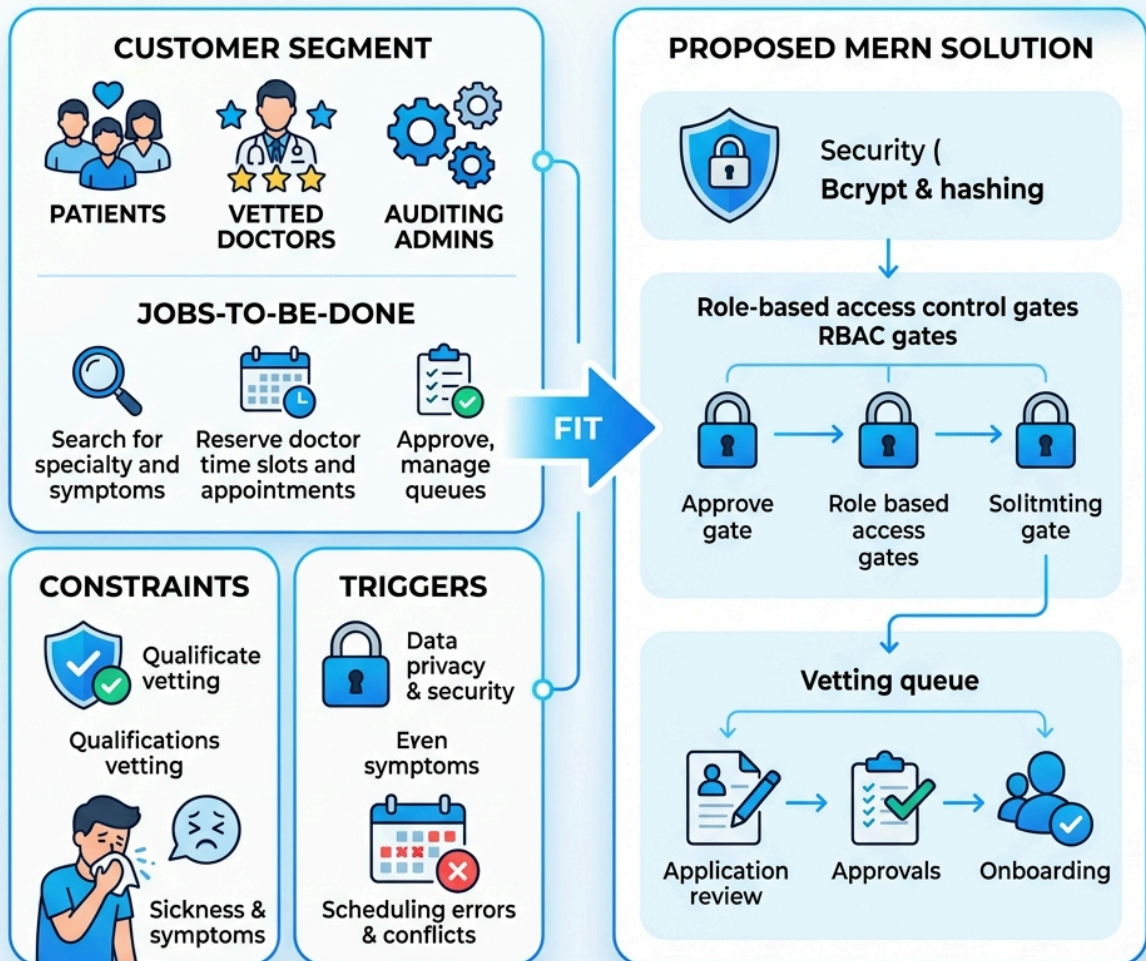

Problem - Solution Fit Template Definition:

The Problem-Solution Fit template validates whether the core customer segments, Jobs-to-be-done, triggers, and constraint barriers are correctly resolved by the functionalities of the proposed system architecture.

Project Implementation: Problem - Solution Fit Canvas (Book a Doctor)

PROBLEM-SOLUTION FIT CANVAS

FOR: MEDICAREBOOK (BOOK A DOCTOR)

Project Mappings:

Customer Segment	Patients seeking local clinical consultations, healthcare practitioners managing booking queues, and platform auditing administrators.
Jobs-to-be-done	Finding verified specialists, reserving slots with instant status feedback, updating doctor consulting rates, and removing corrupt user data logs.
Triggers	Sudden health symptoms, clinic queue bottlenecks, or platform database records clutter.
Emotions	Anxiety regarding clinic wait times, concern about credential fraud, and relief upon booking.

Customer Constraints	Privacy requirements, difficulty verifying qualifications, and scheduling conflicts.
Behaviour	Calling clinic desks, noting slots on paper, and checking listings.
Channels	Web search directories, local clinical lists, and map registers.
Root Cause	Lack of a unified full-stack system with strict administrative vetting and Role-Based Access Control database schemas.
Your Solution	The MERN stack MediCareBook application featuring verified directory listing, custom RBAC routing gates, admin doctor credentials approval panels, and cascading database deletions.
